

## **Kenmure Emergency Evacuation Routes**

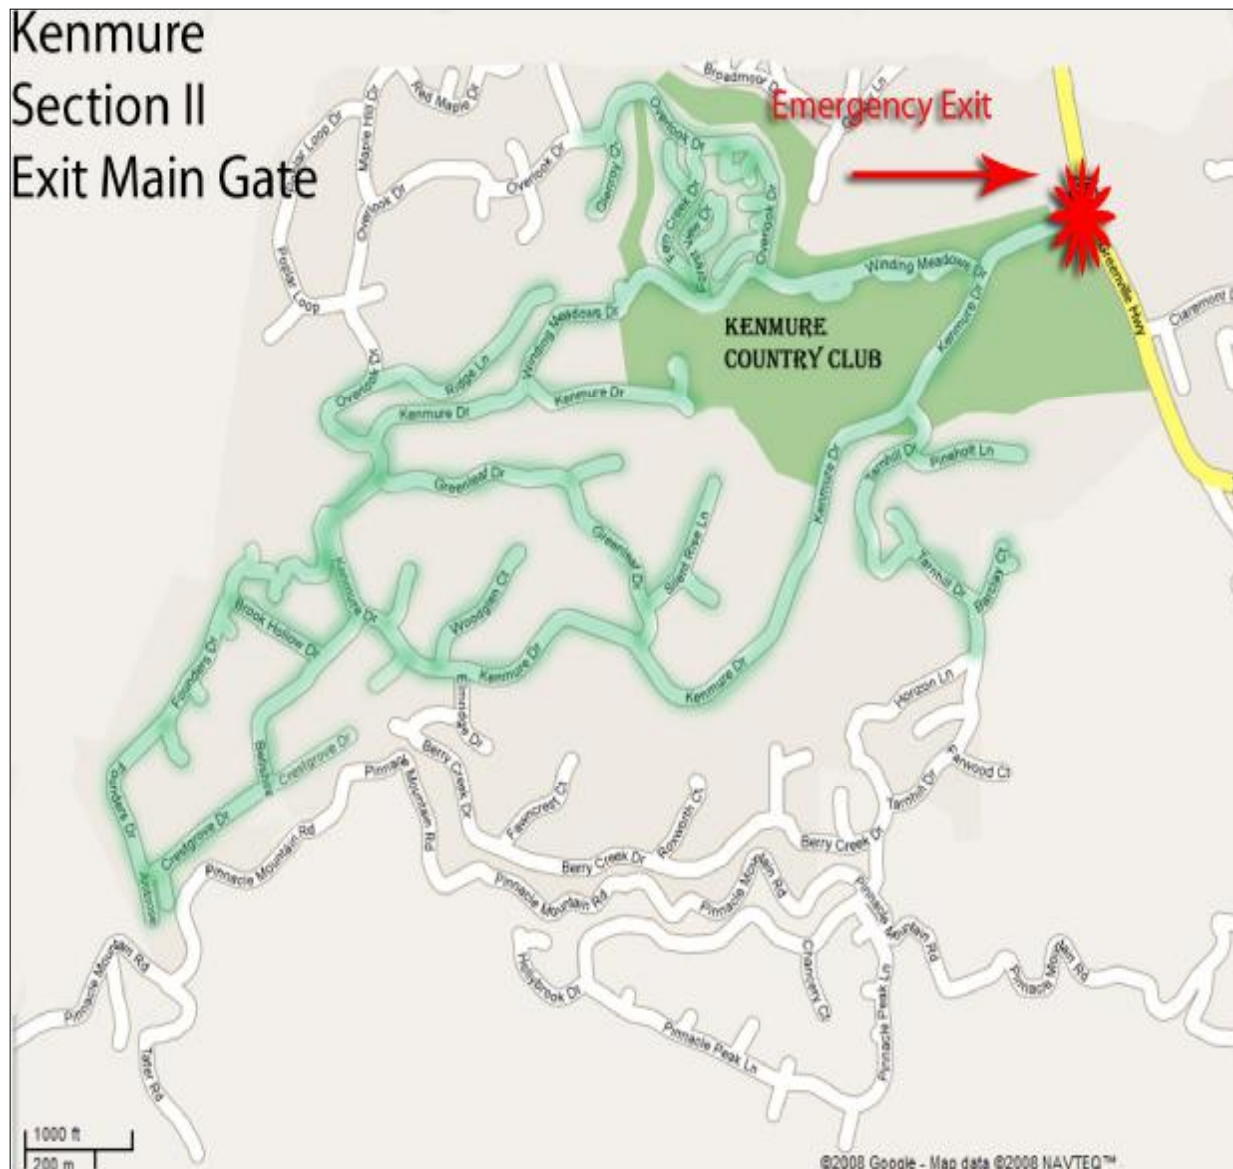

In the event of an emergency requiring the evacuation of all or part of Kenmure, your Emergency Management Committee has devised the following evacuation routes. Please find your street on one of the enclosed maps and locate your assigned Emergency Exit. You should then plan the shortest route from your home to that exit and practice taking that route until it becomes familiar.

If it ever becomes necessary, an orderly and prompt evacuation could save your lives as well as those of your neighbors. We encourage you to take a few moments to check on your neighbors before leaving, *if the situation allows*. Please take this handout with you in case your assigned exit is blocked and you need to take a different route. You will be notified of the need for evacuation and the routes available via a phone call from the automated Emergency Notification System. That number will appear either as “411-000-0000” on your caller ID or 828-692-2346. Road condition information is also available at:

[www.kenmure.org](http://www.kenmure.org) or by calling 828-696-8805.

**Please place this Emergency Evacuation document in a  
location that you can locate easily!**

**Section II Evacuation Route (Shaded in Green) -**  
The Founders area and all of Kenmure Drive, including the area north and east from the Tarnhill Drive/Horizon Lane intersection exit thru the front gate onto Greenville Highway.

**Section III Evacuation Route (Shaded in Green)** - Area south of Tarnhill Drive/Horizon Lane intersection and area South of Elmridge/Kenmure Drive intersection including the Cottage area and the Hollybrook Drive area exit thru the Pinnacle Mountain Road exit onto Pinnacle Mountain Road east to Greenville Highway.

#### **Alternate Evacuation Routes**

It is likely in an emergency requiring Kenmure resident evacuation that one of the listed evacuation routes might not be usable. If this were to happen, that area would evacuate through one of the other evacuation routes.

Example: If the Section I evacuation route was not usable then those residents would evacuate thru the Section II evacuation route.
